Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nakamura et al. (U.S. 6,385,213) teaches a frame synchronous pattern processing apparatus that contains a branch means for branching parallel data into a data switch section and a frame synchronous pattern detection section. Nakamura fails to teach a second sort means for using the outputs of the first sort means and sorting the parallel signals according to all of the bits of the frame position information outputted by the frame detection means.

Yama (U.S. 6,104,770) teaches a synchronization signal detection apparatus that branches serial rather than parallel data into multiple synchronization pattern detection circuits. Yama fails to teach a first and a second sort means that sort parallel signals as claimed.
